SCANFLEX® II BLADE 4
## Multifunctional JTAG/Boundary Scan Controller

- · high-performance controller for embedded test and programming
- · outstanding flexibility through multifunctional I/O channels and FPGA instrumentation for mixed-signal and high-speed test
- · high modularity and scalability through configurable TAP interface cards and additional I/O modules
- · integrated compact unit controllable via USB 3.0 and GBit LAN

Parameters

number of TAP slots	4 (independent and individually configurable with TAP plug-in card)
maximum TCK frequency	20/50/100 MHz (adjustable via software)
parallel I/O channels	64 mixed-signal channels combined with FPGA, individually configurable as Input, Output, Tri-State, via software programmable V_{10} 0.9-3.6 V (8 groups with 8 I/O)
maximum number of I/O modules	30 modules via external SFX carrier
integrated technologies	SPACE™, HYSCAN™, ADYCS™, ChipVORX®, FastScale™

SCANFLEX® II BLADE 4

Flexible controller for embedded test and programming

Embedded test

· support of latest technologies such as Processor Emulation Test, FPGA Assisted Test and Embedded Diagnostics Test

· synchronization with multifunctional I/O channels and ChipVORX® FPGA instruments

High performance

· use of powerful multi-core processors and FPGAs

· simultaneous operation at up to 100 MHz on all TAPs

· operation at up to 100 MHz on I/O channels

· support for gang operations

Embedded programming

· high-speed programming of Flash components like NAND, NOR, SPI, I²C, eMMC etc. (also via I/O)

· universal programming of microcontrollers

· FPGA/PLD programming

Software

· integrated into Embedded JTAG Solutions platform SYSTEM CASCON™

· Plug and Play integration in 3rd party systems

· open mix of test and programming procedures in one software environment

Expandability

· support of up to 30 parallel controlled SCANFLEX® I/O modules

· scalable number of one to four TAPs

· interfaces for additional debug and control components

Adaptability

· transmission over long distances of up to four meter to the target without TCK reduction or transmission problems

· software-parameterized I/O (slew rate, impedance, termination)

· via software selectable protocols (JTAG, DAP, COP, SWD, BDM, SBW, UART etc.)
