

GÖPEL electronic GmbH

All-encompassing test technologies from a single source

Testing technologies that are a pleasure to use.

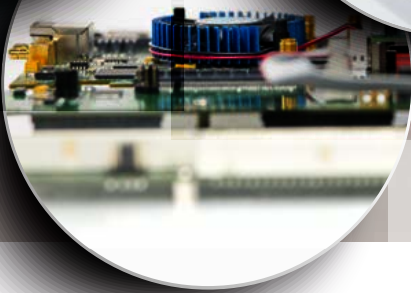

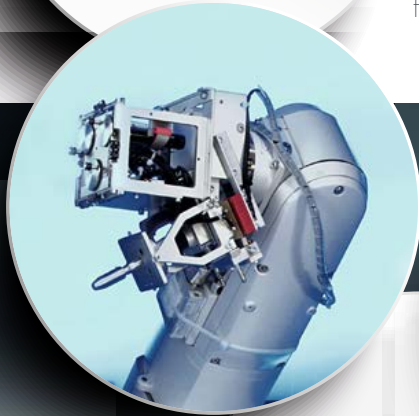

Innovation begins with each individual employee and ultimately makes its way to the customer. The fact that the customer is not only provided with optimum test solutions but can also take pleasure in the simplicity of working with the systems is manifested in the corporate philosophy “Enjoy Testing”.

It is about the many little things that can make testing easier. Easy handling of testing programs, complete test solutions and customised systems aid and accelerate the entire production process – from design to end-of-line.

Constantly growing, yet close to its customers.

GÖPEL electronic GmbH has expanded over the course of time. Physical expansion, continuous growth in sales and ever-increasing numbers of employees testify to organic growth – step by step and year on year. The company's top priority is always the best possible service and a global presence: with offices and distributors in all corners of the world, GÖPEL electronic is always close at hand to help its customers. The promise of quality that comes with „Made in Germany“ is an integral part of the company's philosophy: despite global sales, production takes place exclusively in Jena. Short distances and rapid communication are clear advantages that set GÖPEL electronic apart from the competition.

Test solutions for the automotive industry.

The company branched out into the automotive industry early on. From the development of customised testing technology through to functional testing for large companies, test systems for control units, bus communication and acoustic analysis met with high demand. Thanks to sophisticated technology, GÖPEL electronic was able to break into the industry with its automotive test solutions, from project-orientated engineering companies through to product-orientated developers and manufacturers.

Automotive
Test Solutions

With its roots in optics. Established in electronics.

Based in the city of Jena, famous for its history in optics, the company emerged in 1991 and today offers a uniquely broad range of testing technologies. The testing of electronic assemblies using Embedded JTAG

Solutions was established as the first major business area. The combination of software and hardware has since been constantly improved. Today, thanks to its innovative test strategies, GÖPEL electronic is at the top of the global market in electrical testing.

Made in Germany

With history behind them and a gaze focused on the future.

GÖPEL electronic had a very successful history. In order to always have a solid foundation on which to build in the future, the company strives to be an innovation leader. Almost 20 percent of the annual turnover is invested in research and development. Here, too, it becomes clear that the strategy is focused on long-term and consistent growth. With innovation and productivity, GÖPEL electronic also continues to follow a course which without a doubt will open up new horizons for the company in the future.

Tailor-made and customer-oriented.

From the start GÖPEL electronic has offered customised test systems for industrial electronics and PLC systems (programmable logic controller), tailor-made for regular customers in Germany and China.

These long-standing partnerships demonstrate the things that are important to GÖPEL electronic: outstanding quality, durable products and permanently satisfied customers.

Industrial
Function Test

Optics as an inspiration and benchmark.

The commercial line of Automatic Optical Inspection was the result of the company's roots in the former optics capital. Access to expertise and technology opened the door for exceptional quality assurance in the electronics manufacturing process. With technical progress as the driving force, the company is able to offer customers the fastest test speeds, a great depth of testing and quality assurance in all dimensions. No error escapes the GÖPEL electronic inspection systems – from the start to the finish of the production process.
